These consequences or contingencies may be administered by another person according to Skinner. Skinner proposed that human behavior is shaped by a variety of consequences and that the concept of free will was simply an illusion.

In his theories, Skinner referred to his own philosophy as radical behaviorism and suggested that the concept of free will was simply an illusion. He believed that behavior is based on environmental conditions and that the significant effect of reinforcement on behavior can be observed in many aspects of human life, such as circus acts, amusement parks, TV, movies, etc., which capitalize on the principles of operant conditioning.

Skinner used reinforcement techniques to train animal trainers for circus acts, amusement parks, TV, movies, etc., which capitalize on the principles of operant conditioning. In his work, he demonstrated the effectiveness of reinforcement in shaping behavior.

Operant conditioning is a method of learning that occurs through rewards and punishments for behavior. Through operant conditioning, an individual makes an association between a particular behavior and a consequence. Skinner's theory of operant conditioning was published in 1938.

Behaviorist theory on language acquisition
According to behaviorist theory, language is acquired and taught through a process of shaping behaviors. Behaviorists define learning as nothing more than the acquisition of new observable behaviors and discounts any independent activities of the mind.

Behaviorist theory on language development
Behaviorist theory suggests that language acquisition is strongly dependent on the environment of the child existence with learning and reinforcement forming the core aspect of this early development.
