Framework for the Social Determinants of Early Child Development

Clyde Hertzman MD
University of British Columbia Canada
November 2010

The total environment assessment model for early child development (see figure 1). Team ECD was developed for the World Health Organization's Commission on the Social Determinants of Health to highlight how social factors play important roles in economic development. This has been of late realization on the part of social scientists, the social determinants of economic development include various social institutions such as the family, class structure, caste, religion, traditions, attitudes, beliefs, and culture, etc. The social determinants of work ethics, as well as cultural and social factors which have a close bearing on economic rationality, are to be taken into account while we seek to identify the social determinants of economic development in addition to other social determinants. Economic development may be discussed briefly, social determinants despite their intangible origins have very tangible effects. For example, according to an article in The Atlantic, there is a 20-year life expectancy gap between wealthy and poor areas of Baltimore, Maryland, and other race and class segregated communities across America. This is an outrage, particularly in one of the wealthiest countries on earth.

Social determinants of health (SDOH) are circumstances in which people live that impact their health, including availability of healthcare, educational and job opportunities, environmental conditions, and more. Find social determinants of health examples and inspiring initiatives to tackle them.

How do social determinants of health contribute to the development of illness? Social determinants of health in nursing: what are social determinants of health? How do social determinants...
determinants of health contribute to the development of illness what is a communicable disease chain are there steps that a nurse can take to break a link

Excerpt from the 2008 World Health Organization Commission on Social Determinants of Health Final Report Executive Summary: What are social determinants of health and development? Social determinants refer to broader social factors such as income inequality or social exclusion that lead to or influence health and development outcomes. This paper offers an overview of the current state of knowledge of the critical social determinants of child development and the complex ways in which these can influence health trajectories.

During the past two decades, the public health community’s attention has been drawn increasingly to the social determinants of health (SDH), the factors apart from medical care that can be influenced by social policies and shape health in powerful ways. Research has demonstrated that social determinants are associated with the disproportionate development of chronic conditions and challenges encountered when managing them. This is particularly true of type 2 diabetes, which will be used to illustrate concepts throughout this article.

Clinical interventions have consistently evolved to address the social determinants of health that lead to or influence health outcomes. This is particularly true of type 2 diabetes, which will be used to illustrate concepts throughout this article. Clinical interventions have consistently evolved to address the social determinants of health that lead to or influence health outcomes. This is particularly true of type 2 diabetes, which will be used to illustrate concepts throughout this article.

Nursing practice must recognize these social determinants and adopt strategies to address them. This report focuses on social determinants of drug use and structural interventions to address these social determinants. It draws upon recent research on the social epidemiology of health, incorporating a developmental perspective. This perspective highlights the environments and experiences that influence early childhood development (EC). The total environment assessment model for early child development, see figure 1. Team ECD was developed for the World Health Organization’s Commission on the Social Determinants of Health to highlight the environments and experiences that influence ECD. Team ECD builds on the bio-ecological model of developmental psychology and foundational concepts of biological development. The social determinants of health and a healthy community what determines health? Many people think of their health as a result of personal choices they make such as choosing to eat more fruits and vegetables, being active for at least 30 minutes or more, choosing not to smoke, or drinking alcohol in moderation. Social determinants of economic development imply that economic growth leads to increases in production and generation of income and equitable distribution of this income among the population to improve the quality of
