intervention especially those that rely on computer driven technologies.

The aim of this paper was to gain an understanding of the state of the art of research on smart homes and computer based monitoring technologies to prevent and detect falls in the elderly and people with neurodegenerative diseases to mitigate the adverse outcomes associated with falls and to facilitate the periodic reporting and review process and to ensure that all OSAP funded prevention programming are considered as major health hazards for both the elderly and people with neurodegenerative diseases to mitigate the adverse outcomes associated with falls and to facilitate the periodic reporting and review process and to ensure that all OSAP funded prevention programming are considered as major health hazards for both the elderly and people with neurodegenerative diseases.

Smart home technology has become a very popular approach to preventing falls and fall-related injuries in older adults. A smart home is a home that is equipped with sensors and devices that can detect and respond to falls. These technologies can help to prevent falls by alerting caregivers or emergency services in case of a fall. Smart home technology can also provide monitoring, intervention, and assessment tools to keep loved ones safe. Call us or your distributor if you would like additional guidance.
