3.1 Algebra: Solve quadratic equations. The two roots of a quadratic equation $ax^2 + bx + c = 0$ can be obtained using the following formula: $b^2 - 4ac$ is called the discriminant of the quadratic equation. If it is positive, the equation has two real roots.

Assign the product of variables $b$ and $c$ to variable $a$. State that a program performs a payroll calculation, i.e., use text that helps to document a program:

- Input three integer values from the keyboard into integer variables $a$, $b$, and $c$.
- 2.10 State which of the following are true and which are false. If false, explain your answers.

Tutorial Basics for Beginners: Introduction

This tutorial is intended for beginners who have no or almost no computer programming experience. It assumes the reader is following the instructions and reading the text carefully. It is not intended to be a quick guide for filling in the gaps in a person's computer programming knowledge.
