born John Leslie advertised his first major product—a steam powered snowplow for railroad locomotives. Power plant engineering or power station engineering is a division of power engineering and is defined as the engineering and technology required for the production of central station electric power. The field is focused on the generation of power for industries and communities, not for household power production.

Power engineering, also called power systems engineering, is a subfield of electrical engineering that deals with the generation, transmission, distribution, and utilization of electric power and the electrical apparatus connected to such systems. Although much of the field is concerned with the problems of three-phase AC power—the standard for large-scale power transmission and control systems for power generation and CHP, complete peripheral and main controller for diesel and gas generators—digital speed governors based on CAN bus actuators for integral or external use on throttle...
