Diagnostic radiology 1 review Massachusetts General Hospital Interventional Radiology 55 Fruit St Boston, MA 02114

The mass extended into the cecum and ascending colon. Fig 2A, the mass demonstrated peripheral enhancement and uniform central low attenuation of 30 HU. The mass was now dumbbell-shaped (Fig. 2A) in contrast to the lobulated appearance in the prior pelvic CT study. The distal ileum was mildly dilated.

Dr. Rosman was also key in arranging the first resident global health elective for Mass General Radiology residents. Tanzania pediatric radiologist Sjirk Westra MD taught at the Kilimanjaro Christian Medical Center in Moshi, Tanzania as part of the RSNA international visiting professor program.
