Nursing research is practice or discipline oriented and is essential for the continued development of the scientific base of professional nursing practice. Nursing research is a detailed, systematic study of a problem in the field of nursing, considering other sources of documentation that may improve nursing care. Research published by other disciplines, such as medical research and social research, is also included.

Historically, nursing has embraced a positivistic approach to the development of nursing science and research. Evidence-based practice goes beyond nursing research in considering other sources of documentation that may improve nursing care. Nursing research is critical to the nursing profession and is necessary for continuing advancements that promote optimal nursing care.

Evidence-based practice is the method used to assess and diagnose needs, plan outcomes, and implement interventions. Let's reflect on how health knowledge has been generated in traditional societies. Evidence-based practice will be presented in the context of ongoing changes in Australian social, political, and professional environments. The place of research in generating knowledge and the role of nurse leaders will be discussed.

The nursing process is the method used to assess and diagnose needs, plan outcomes, and implement interventions. It is focused on individual research communities and publishing all scientifically valid nursing research results. Nursing research has a long and distinguished record in the history of nursing science since its launch in 1952. It has been a cooperative venture of scientists, professional organizations, publishers, editorial staff, and readers to circulate scientific papers in nursing to improve care, alleviate suffering, and advance well-being.

In universities as well as in the healthcare setting, exploring all aspects of nursing research, training, education, and practice, BMJ Nursing is a well-established, open-access, peer-reviewed journal. Rapid publication upon acceptance makes research swiftly available to a growing readership. This journal is part of the BMJ series, a collection of journals that are reviewed journals.

The nursing process is the method used to assess and diagnose needs, plan outcomes, and implement interventions. It is focused on individual research communities, publishing all scientifically valid nursing research results. Nursing research has been developing since the time of Florence Nightingale to the present day, where many nurses now work as researchers based in universities as well as in the healthcare setting.
