Variable frequency drive is a device used in a drive system consisting of the following three main sub systems: ac motor main drive controller assembly and drive operator interface. A vfd system is usually three phase induction motor. Some types of single phase motors or synchronous motors can be advantageous in some situations. The principle of the thyristor is an electronic semiconductor. The thyristor is composed of four layers of silicon doped alternately by acceptors p and donors n. The structure of the thyristor can be modeled by two transistors pnp and npn connected according to the scheme below. The two main terminals, anode and cathode, are located at the ends of the structure pnp and npn. Research and applications.
