Soaps Detergents Surfactants Cleaning Powder Washing And

the introduction of enzymes into laundry detergents dramatically changed how we do laundry. Enzymes allow us to use lower water temperatures and less detergent to get clothes clean for many many years the only way to achieve clean laundry was to use boiling water and harsh lye based soaps, the next goal was to create a detergent that could clean heavily soiled clothes that detergent was tide created in 1943 tide detergent was the combination of synthetic surfactants and builders the builders helped the synthetic surfactants penetrate the clothes more deeply to attack greasy difficult stains, all laundry detergent ingredients have a job to do but the one group that’s really crucial to getting your clothes clean are surfactants the word surfactant stems from the combination of words surface active agents surface active agents get their name from their unique chemical structure which see the uk detergent information page for more information on how to work out how much detergent to use for both pre and main wash cycles standards for the detergent index it is our aim and our expectation that the items washed come out of the main wash cycle in an as new condition ie no smells or staining at all, the detergent manufacturing business cleaning products formulas
