April 15th, 2019 - Finding the Slope of a Line Given Two Points No Graph Worksheet 1 Here is a ten problem worksheet where you will be asked to calculate the slope of a line Each exercise feature two points and you will have to calculate the rise and run between the two points by finding the difference between the x coordinates and the y coordinates

Graphing Point Slope Form
Graphing Point Slope Form Objective: Give the equation of a line with a known slope and point. The slope-intercept form has the advantage of being simple to remember and use, however, it has one major disadvantage: we must know the y-intercept in order to use it. Generally, we do not know the y-intercept, so we only know one or more.

Graphing Slope

April 20th, 2019 - Graphing Slope

Objective: Find the slope of a line given a graph or two points.

As we graph lines, we will want to be able to identify different properties of the lines we graph. One of the most important properties of a line is its slope.

Slope is a measure of steepness. A line with a large slope such as 25 is very steep.

Slope Wikipedia

April 20th, 2019 - The derivative of the function at a point is the slope of the line tangent to the curve at the point, and is thus equal to the rate of change of the function at that point. If we let $x$ and $y$ be the distances along the $x$ and $y$ axes respectively, then between two points on a curve, then the slope given by the above definition.

Determine Slopes from Equations Graphs and Tables

April 10th, 2019 - Slope is a constant rate of change for a linear function. You can use equations, graphs, and tables to represent the slope of a linear function and you can use the slope formula to calculate the slope between two points. In this resource, you will examine equations, tables, and graphs that all represent linear functions.
