The skil 7 1/4 magnesium mag 77 switch is a replacement switch for the HD77 worm drive saw. It was introduced in February 2009, replacing the obsolete switch. The new switch is wired differently than the old switch was wired. This article explains how to wire both switches.

To remove the wires from the old switch and replace it with the new switch, follow these steps:

1. Remove the wires from the old switch.
2. Disconnect the wires from the new switch.
3. Attach the new switch to the cord relief.
4. Connect the wires to the new switch.

The new switch is wired as follows:

- The black wire is connected to the red wire.
- The white wire is connected to the black wire.
- The green ground wire is connected to the green ground wire.

The old switch is wired as follows:

- The black wire is connected to the black wire.
- The white wire is connected to the white wire.
- The green ground wire is connected to the green ground wire.

When replacing the switch, ensure that the wiring is correct and that all connections are secure. If you are not confident in your ability to wire the switch, it is recommended to consult with a professional or seek help from an expert.

The new switch is available on eBay through top-rated sellers, ensuring that you can purchase it without worrying about the quality. Always double-check the wiring diagram and ensure that all connections are made correctly to avoid any issues with the tool.
