compu flow valve body the ati compu flow transbrake is designed to replace the stock valve body on any aluminum powerglide transmission. Before replacing the valve body, remove the vacuum line from the modulator and discard it. Then, plug the vacuum source at the engine and using a 1 wrench, remove the vacuum modulator, powerglide transmission modulator, and other issues affecting modulator performance. The modulator should be inspected if it fails, as it can cause problems with shifting. If the small rubber connector tube is clogged, it can contribute to idle problems. The device contains a diaphragm and valve if your engine is hot and you cannot determine checking the powerglide pg fluid level. I need some help or diagram for the vacuum lines on the 283 with factory AC. I'm having trouble figuring out the vacuum lines from the 2-speed Powerglide and the factory AC. I don't have the T-fitting at the back of the manifold—its a 90 and goes only to the brake booster.

The term kickdown on a Powerglide is a misnomer. The rod is really a TV rod that controls pressure in the transmission, yes, it still accomplishes kickdown but uses throttle valve pressure to do this. Just because this unit has a vacuum modulator, it does not use the modulator like a TH350 or TH400.
