and the human skeleton. The skeletal system is comprised of all the bones in the human body. The skeletal system provides strength and rigidity to our body, so it is called skeletal. The human skeletal system has six major functions including providing support for movement, protection, production of blood cells, storage of ions, and endocrine regulation. The longest bone in the human body is the thigh bone, also known as the femur. The smallest bone in the human body is located in the middle ear. Science for kids, preschool science, science classroom, teaching science, science activities, activities for kids, digestive system for kids, system model, science fair projects. Science for kids, Body Parts, Joints & Skeletal System Experiments for kids - Operation Ouch

April 13th, 2019 - How do joints in the skeletal system work? Biology and body parts for kids explained in this video. Operation Ouch is a British science show for kids that is full of experiments and biological.
