limitations and exceptions for libraries and archives and education have been on the agenda at WIPo since 2011. Work on the topic has been extensive and substantive and has enjoyed much support from most WIPo member states, but two allied groups of member states—the European Union (EU) and the group of Central European and Baltic States (CEBS)—have resisted progress.

Public Domain Dedication

The Information Society Project at Yale Law School has issued a set of technology policy recommendations aimed at helping shape public debate on the topic during the current U.S. presidential election. Frequently asked questions about data generally, which components of databases are protected by copyright with databases, there are likely four components to consider: 1) the database model or structure, 2) the data entry and output, 3) field names, and 4) the data or other content.

Ed Dam Katz is director of the Information Society Project at Yale Law School since its founding in 1997. The Information Society Project at Yale Law School has studied the implications of the Internet and new information technologies for law and society. Our mission is to promote the values of democracy, human development, and social justice in a changing world. As mentioned earlier, to assess the value of the public domain, the European Commission has launched a tailor-made project—the Economic and Social Impact of the Public Domain. In the Information Society Project, the findings of that project shall be of avail in the following analysis. The International Federation of Library Associations and Institutions (IFLA) is the leading international body representing the interests of library and information services and their users. It is the global voice of the library and information profession.
